

Ideation Phase

Project Initialization and Planning Phase

Date	25 June 2026
Team ID	
Project Name	OptiCrop: Smart Agricultural Production Optimization Engine
Maximum Marks	2 Marks

Customer Problem Statement:

Farmers and agricultural stakeholders struggle to identify the most suitable crop due to variations in soil nutrients and environmental conditions. The lack of accurate, data-driven recommendations often results in reduced crop yield, inefficient resource utilization, and financial losses. OptiCrop addresses this challenge by leveraging machine learning to provide intelligent crop recommendations based on soil and climatic parameters.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A farmer	Select the most suitable crop for my farmland	I don't know which crop matches my soil and weather conditions	I lack scientific guidance and agricultural data analysis	Confused and worried about crop failure and financial loss
PS-2	An agricultural researcher	Recommend crops that maximize productivity	Existing methods rely on manual analysis and historical data.	They are time-consuming	Inefficient and uncertain while making farming decisions
